

Borche BS-200 Hybrid

Staying ahead of today's technologies, ARC Technologies, Inc. has expanded its injection-molding capabilities with the addition of a new Borche BS-200 Hybrid injection molding machine. This machine features a 16 oz./473 cm³ shot size. With built-in SPC process capabilities, this machine is able to maintain a process and hold it within the tolerances specified by ARC. These ranges are based on production output, statistical analysis, and customer requirements.

ARC's Injection-Molding line allows for custom solutions for RF and EMI problems. The addition of this machine has increased ARC's capacity and also allows for shortened time. ARC now offers injection-molded 6" x 6" sample plaques.
